A new era has begun: artificial intelligence, biotechnology and the upcoming space age are changing the world faster than ever before. The future is fantastic and threatening at the same time. Between pandemics, climate change, mass flood of information and conflicts, the view of the essential is lost, and individual humans are coming out of focus. We are lost between consumption and social change.

In this area of tension, the crucial questions arise: What makes us unique as human beings? What made us what we are? What are we tomorrow? And how do we remain free and self-determined?

Prof. Dr. Dr. Christoph Cremer, Werner H. Heussinger, Heike Görner and Ralph-Dieter Wilk give a look behind the scenes of human history and familiarize them with the spiritual tools that are needed to maintain human freedom.

This freedom is the elixir of life that keeps the whole world going. Only with it can there be real innovation, sustainable progress and a living democracy. The journey of humanity has only begun ...

»A remarkable book (...) In their argumentation, the authors show themselves as significant thinkers who present considerations to readers beyond what has already been heard often. And it is gratifying to know that despite technological progress, humanity can be preserved. Their argument is based on the conviction that man is unique. (...) The authors are mostly Freemasons and continue the tradition of courageous enlighteners and innovative spirits. All this makes the book highly recommendable."

Mannheimer Morgen / Schwetzingen newspaper

»For all those who want to work for a sustainable, human and future-oriented society, this book is a wonderful source of inspiration. It contains basic analyses of the challenges and transhumanistic dangers. But accompanied by **exciting solutions** to preserve humanity in its abundance and beauty. **For me, incredibly inspiring.** (...) This work was written by four very impressive authors. In their view, a new era has begun, which will change the world as quickly as never before. An inspirational book that deals with the necessity of a radical change in thinking and acting in our society. "**Be your own think tank**," says it in the subtitle, and that's definitely the program in the book. (...) It is undoubtedly a book that makes you think and opens up new perspectives - the thematic range is considerable. The authors present a vision for a better future. And they show how each individual can help to realize this vision. It is written clearly and concisely. (...) The authors emphasize that we need to go beyond traditional thought patterns and develop new perspectives and solutions. They present various models and examples of how this can be implemented in practice. **A really impressive book!**

Celine Nadolny, award-winning blogger and, according to Forbes business magazine, the most influential non-fiction critic in Germany

»The book puts people in the universe and arouses lust for the future. The thinking of hope makes this carefully crafted work orientation for those who threaten to lose themselves in the jungle of published opinion and seek a way

out."

***Monsignor Dr. mult. Michael H. Weninger, Ambassador a. D. and former.
Membership
in the Pontifical Council for Interreligious Dialogue at the Vatican Curia***

»Is there the second Enlightenment? Yes. A successful attempt is before the readers of this enlightening and courageous book. A noble prize-winning scientist, a successful founder of a listed group of companies and socially engaged people have come together here as authors."

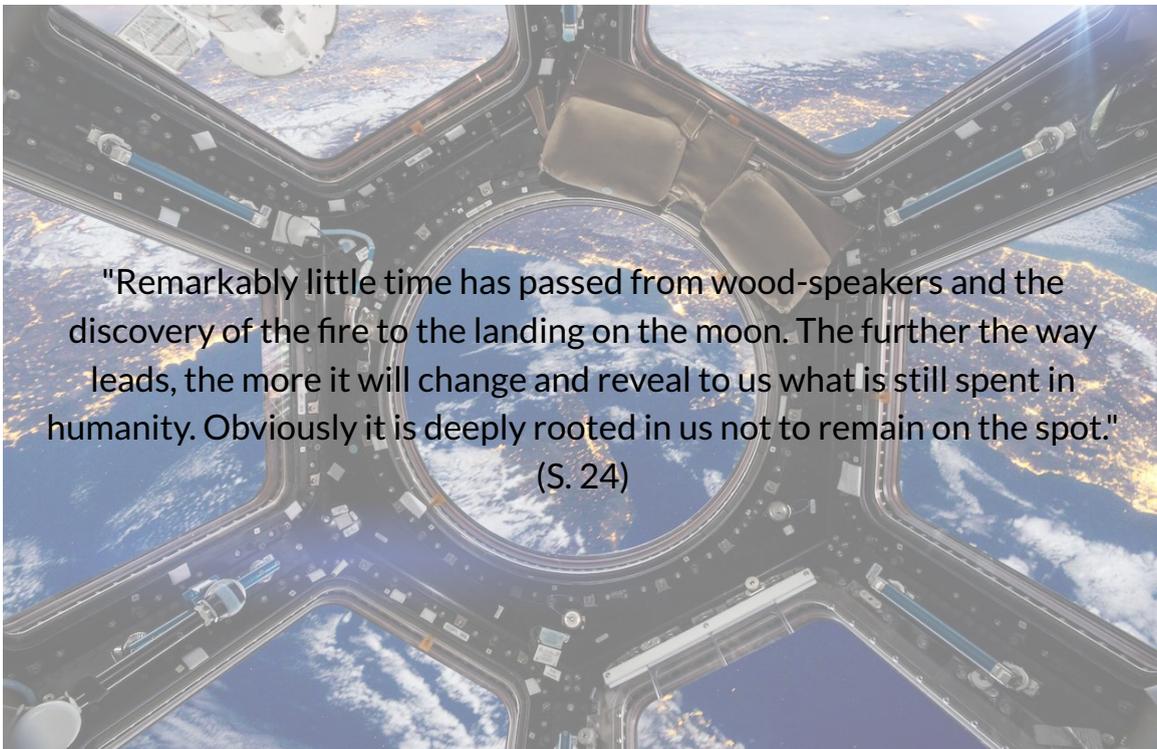

Dr. Uwe Matthes, Order Master of the Grand Lodge of the Freemasons of Germany

»The book is a blueprint for our future and in particular a treat for (young) people who want to use the engine of their own think tank."

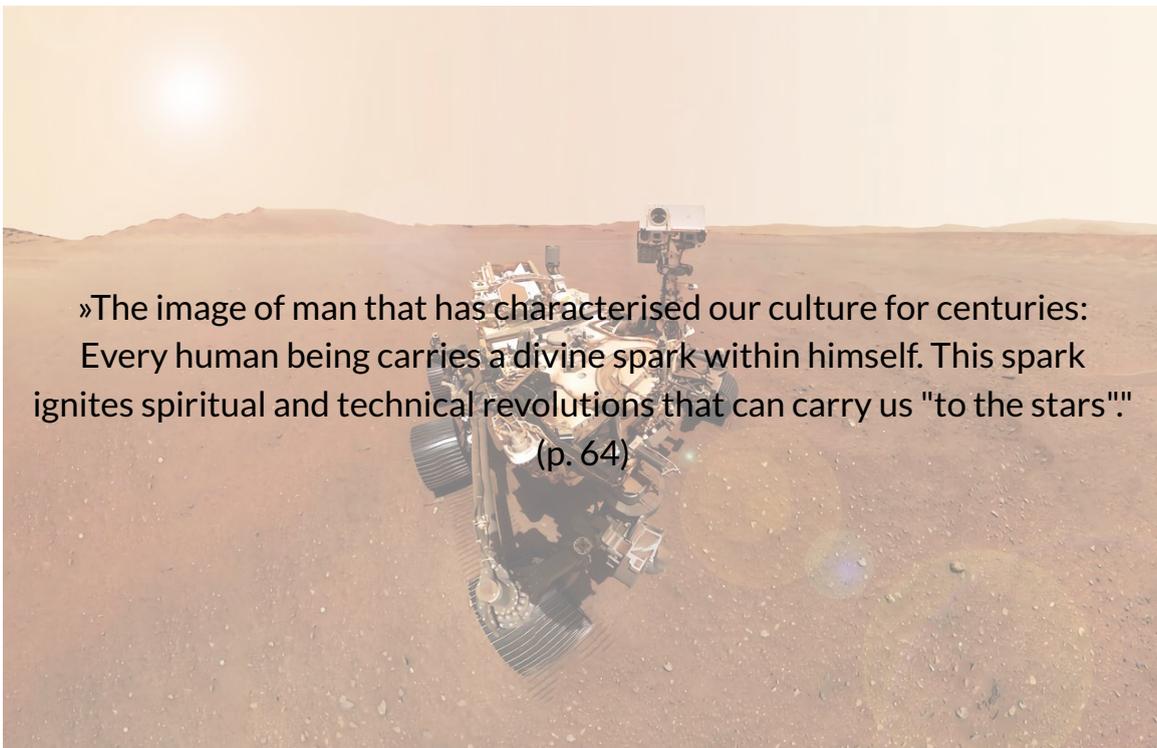

Prof. Dr. Hans-Peter Meinzer, Bioinformatician

»This is how the future is fun. The book illuminates areas of the development of humanity that were not previously known in such interconnections. One is amazed at reading, stimulated to new thinking and repeatedly encountered the great picture. In the end, the question is justified as to whether perhaps the next step in development of mankind will be a spiritual evolution."

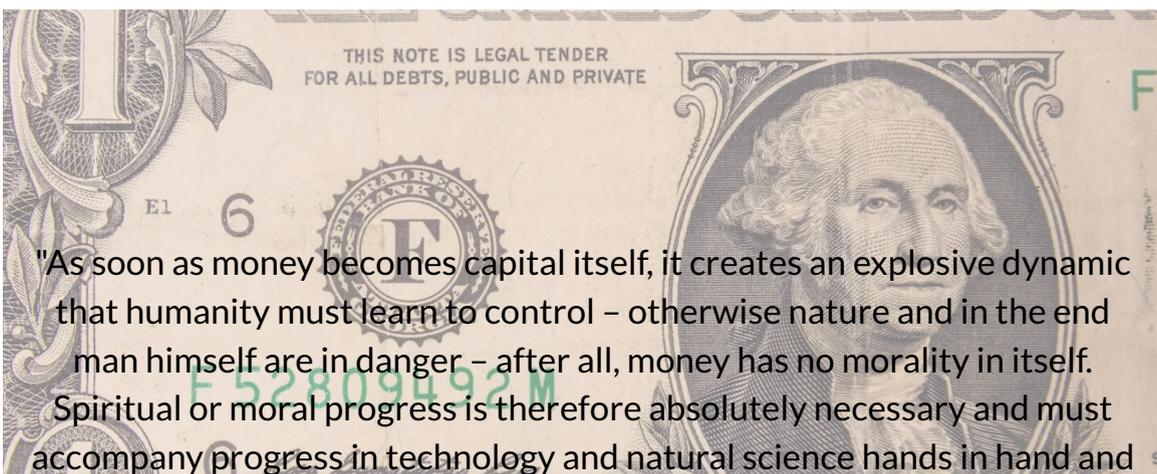

Dr. Jonas Moßler, AI start-up entrepreneur

"Remarkably little time has passed from wood-speakers and the discovery of the fire to the landing on the moon. The further the way leads, the more it will change and reveal to us what is still spent in humanity. Obviously it is deeply rooted in us not to remain on the spot."
(S. 24)

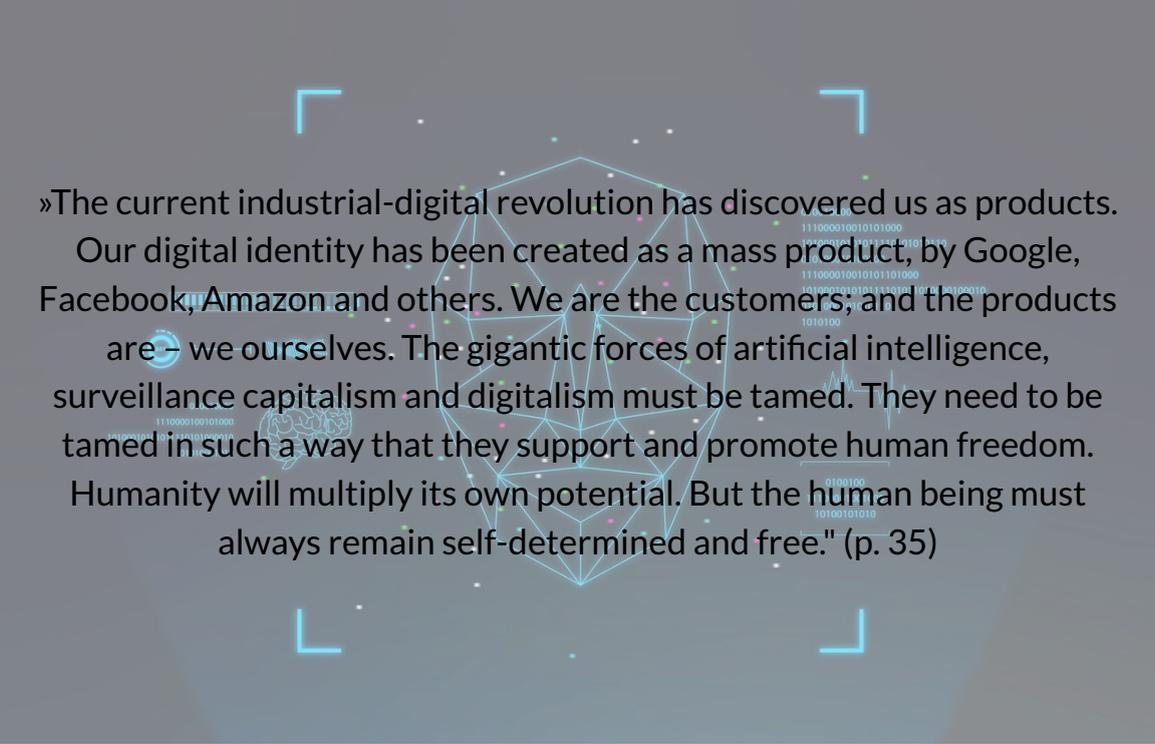

»The image of man that has characterised our culture for centuries: Every human being carries a divine spark within himself. This spark ignites spiritual and technical revolutions that can carry us "to the stars!"
(p. 64)

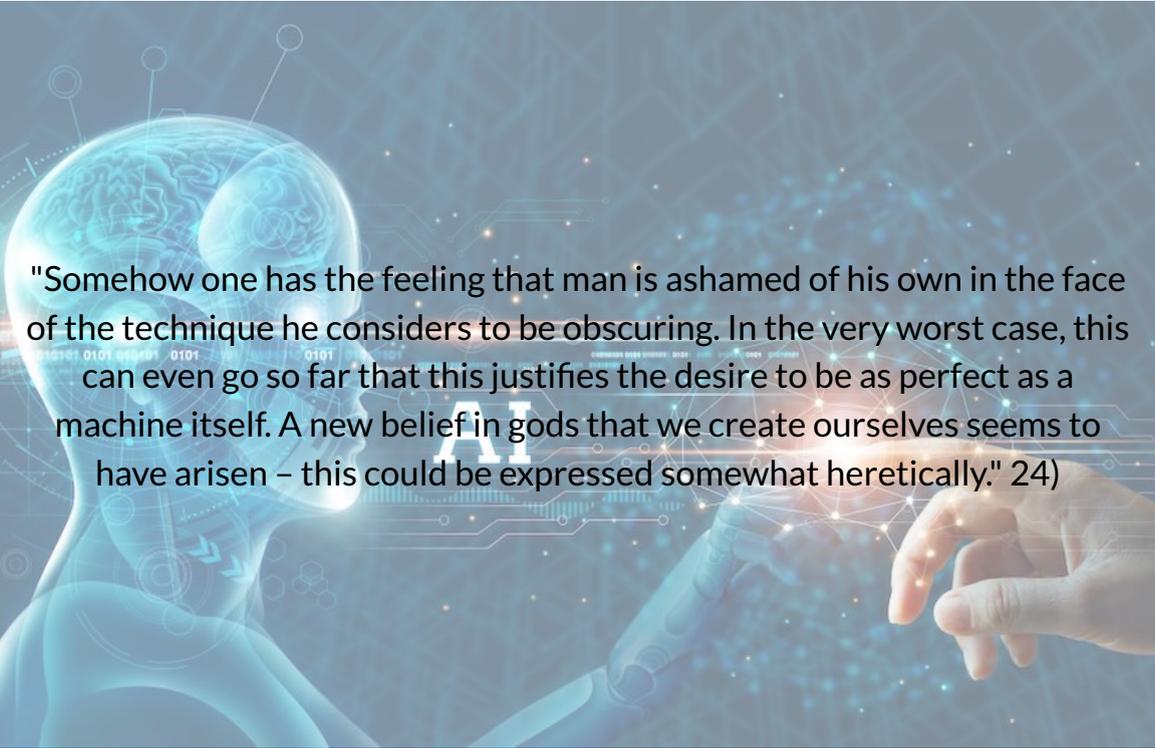

"As soon as money becomes capital itself, it creates an explosive dynamic that humanity must learn to control – otherwise nature and in the end man himself are in danger – after all, money has no morality in itself. Spiritual or moral progress is therefore absolutely necessary and must accompany progress in technology and natural science hands in hand and

on an equal footing." 116)

»The current industrial-digital revolution has discovered us as products. Our digital identity has been created as a mass product, by Google, Facebook, Amazon and others. We are the customers; and the products are – we ourselves. The gigantic forces of artificial intelligence, surveillance capitalism and digitalism must be tamed. They need to be tamed in such a way that they support and promote human freedom. Humanity will multiply its own potential. But the human being must always remain self-determined and free." (p. 35)

"Somehow one has the feeling that man is ashamed of his own in the face of the technique he considers to be obscuring. In the very worst case, this can even go so far that this justifies the desire to be as perfect as a machine itself. A new belief in gods that we create ourselves seems to have arisen – this could be expressed somewhat heretically." 24)

»ChatGPT is on everyone's lips, enthusiasm and worry at the same time give us an idea of what possibilities and dangers AI already has. Our image of man is questioned. The book comes at the right time. Everyone should read the revolution of thinking. Thanks to the authors for so much courage and diligence to publish such a successful book on current events. Top! 5 stars and highly recommended»

Kultur e.V.

All authors are active in leading positions at the interdisciplinary think tank Heidelberg Talks Gesellschaft.

The Heidelberg Talks Association encourages people to think freely and take more responsibility for their own actions. For this purpose, an active exchange of leading humanities and natural scientists is organized, also visible in the advisory board of the Heidelberg Talks Society and in the publicly accessible lectures and discussions. Here, active personalities from politics, business, science, society and culture present current and future-oriented topics and then enter into a dialogue.
